NC-673

Fanless P-III class PISA half card
Low Power

VIA VT8606/686B chipset, VIA Eden ESP 400/533/667MHz low-power fanless 192K L1/L2 Cache CPU, 100/133 FSB, PC133 SDRAM, AGP-4X SMA LVDS/TFT/DSTN LCD/ CRT, ATA100 IDEx2, LAN, RS-232/422/485, Parallel, USB, IrDA, WDT, CF-2, PISA, ATX control pin, Single +5V, Hardware monitoring, I2C signal pin; Optional AC97 Audio board

USER'S MANUAL

COPYRIGHT NOTICE

This user's manual list necessary information to assist both Embedded Computer manufacturers and end users in installing and setting up the system. The information contained in this user's manual is subject to change without any notice.

This manual is copyrighted 2003. You may not reproduce by any way.

ACKNOWLEDGEMENTS

CHAPTER 5: WDT

CHAPTER 6: AWARD BIOS SETUP

APPENDIX A: TECHNICAL SUMMARY

APPENDIX B: TROUBLE SHOOTING

CHAPTER

1

INTRODUCTION

THIS CHAPTER SHOWS THE INFORMATION ABOUT THIS CPU CARD AND ITS SPECIFICATIONS.

SECTIONS INCLUDE:

* ABOUT THIS MANUAL

* SPECIFICATIONS

* SAFETY PRECAUTIONS

1-1 ABOUT THIS MANUAL

This manual is written to assist you to install and set up the system.

Chapter 1: INTRODUCTION

This chapter introduces you the background of this manual, and the specifications for this system. Final in this chapter will indicate how to avoid the damages for this SBC.

Chapter 2: HARDWARE CONFIGURATION

This chapter outlines the components' locations and their functions. It shows the way that how to set jumper and how to configure this card.

Chapter 3: AGP-4X LCD/VGA/TV

AGP-4X 64-bit 2D/3D LCD/CRT with 2M~8M SMA memory (share system memory as display memory), support 1024x768 TFT LCD and 1600x1200 true color CRT.

Chapter 4: 100/10M ETHERNET

This chapter offers the detail information about Ethernet. How to install the configuration also included

Chapter 5: WDT

Helpful information about Watchdog Timer function.

Chapter 6: AWARD BIOS SETUP

This chapter indicates how to set up the BIOS configurations.

Appendix A: TECHNICAL SUMMARY

This appendix gives you the information about the Award BIOS.

Appendix B: TROUBLE SHOOTING

This appendix outlines the errors and offers you the method how to isolate the problems.

1-2 SPECIFICATIONS

* **CPU:** P-III class VIA Eden ESP ESP4000/5000/6000 400/533/667MHz low-power fanless CPU, 3W/5W/5W, 128K L1 cache & 64K L2 cache, **100/133 FSB, 0~85C..**

* **System chip: VIA VT8606 (PN133T Twister-T) & VT82C686A/B.**

* **Cache memory: 128K L1 Cache & 64K L2 Cache built in CPU.**

* **BIOS: Award/AMI BIOS, 256KB (Flash) EPROM**

* **MEMORY: 1 x 168-pin DIMM socket support memory up to 512MB PC133/PC100 SDRAM/ VCM-SDRAM.**

* **AGP-4X LCD/ LVDS/ CRT: AGP-4X Savage4 3D/2D LVDS/TFT/DSTN LCD/CRT W/ 8M~32M SMA memory (share system memory as display memory), support 1600x1200 TFT/DSTN/LVDS (2-channel 110MHz) LCD & 1920x1440 2D/3D CRT.** Also support <u>16:9 display</u> **(resolution 848x480 and 1280x768).**

* **DVD: Hardware-Assisted MPEG-2 architecture for DVD full-screen video playback**

* **100/10M Ethernet: Realtek 8139C LAN x 1, or, Intel 82559 LAN x 1**

* **Optional Audio:** AC97 Audio signal pin on board

* **CMOS Backup: CMOS Back up by Li battery.**

* **IrDA and USBx4: USB and IrDA pin header on board**

* **Temperature /fan monitoring: 686B on-chip function**

* **I2C:** I2C signal pin.

* **CompactFlash I/II socket:** CF-2 socket for IDE Flash Disk, or, IBM 1.8" MicroDrive 340MB/1GB HDD

* **PS/2 Keyboard & Mouse connector:** DIN & pin header

* **BUS TYPE: PISA (PCI+ISA) Bus**

* **Speaker: Buzzer on Board.**

* **WATCHDOG: Programmable 0 ~ 256 sec.**

* **ATA100/66/33 IDE Port x 2:** **Up to 4 x IDE devices.**

* **FDD:** **Two 3.5" or 5.25" FDD or LS120**

* **Serial Port x 2:** **RS-232 x1 + RS-232/422/485 x 1 (+5V/+12V Power Output in Pin1 or Pin9)**

* **PARALLEL PORT:** **Bi-directional SPP/EPP/ECP port**

* **Power Requirement:** +5V & +12V or **Single +5V** by 4-pin power connector; ATX Power control pin

* **OPERATING TEMPERATURE:** **0 to 60   (140   ) and 0~85   CPU support fanless application..**

* **BOARD DIMENSION:** **185mm x 122mm**

* **BOARD WEIGHT:** **0.34Kg.**

1-3 SAFETY PRECAUTIONS

Follow the messages below to avoid your system from damage.

1. Avoid your system from static electric power on all occasions.

2. Stay safe from the electric shock. Don't touch any components of this card when the power is ON. Always disconnect power when the system is not in use.

3.Remove power when you change any hardware devices. For instance, when you connect a jumper or install any cards, a surge of power may damage the electronic components or the whole system.

HARDWARE CONFIGURATION

THIS CHAPTER SHOWS YOU THE CONNECTORS & JUMPER SETTINGS, AND COMPONENTS' LOCATIONS.

SECTIONS INCLUDE:

* JUMPERS/CONNECTORS QUICK REFERENCE TABLE

* COMPONENTS' LOCATIONS

* CONNECTOR PIN ASSIGNMENTS AND JUMPER SETTINGS

2-23 EXTERNAL ATX POWER CONTROL PIN (J13)

PIN	ASSIGNMENT	PIN	ASSIGNMENT
1	GND	2	POWER ON
3	ALWAYS 5V		

Note: *Refer to the diagram on the previous page for the location of PW/ON.*

This CPU board can support an advanced soft power switch function if an ATX power supply is used. To enable the soft power switch function:
1. Take the specially designed ATX-to-PS/2 power cable out of NC-673's accessory bag.
2. Connect the 3-pin plug of the cable to EXTATX (ATX feature connector).
3. Connect the power on/off button to PW/ON. (A momentary type of button should be used).

2-24 AT OR ATX POWER SELECT (J11)

1-2 ON: AT   1-2 OFF: ATX

2-25 POWER BUTTOM (CN5)

2-26 MODEM WAKE UP (JWOM1)

1	5V	2	GND
3	SIGNAL		

2-27 RESET CONNECTOR (RST)

2-28 HDD LED (J1)

PIN	ASSIGNMENT	PIN	ASSIGNMENT
1	VCC	2	SIGNAL

2-29 POWER INDICATOR (J4)

	ON	POS	STR	STD
D2	OFF(RED)	ON(RED)	ON(RED)	OFF(RED)
J4	ON(GREEN)	ON(GREEN)	OFF(GREEN)	OFF(GREEN)

2-30 LAN ENABLED OR DISABLED (J5)

1-2 ON: DISABLED   **1-2 OFF: ENABLED**

2-31 CPU CLK SETTING (JP5)

CPU CLK / PIN	1-2	3-4	5-6	7-8
AUTO	ON	ON	OFF	OFF
66 MHz	OFF	OFF	ON	ON
100 MHz	OFF	OFF	OFF	ON
133 MHz	OFF	OFF	OFF	OFF

2-32 RS-422 ALWAYS ENABLED JUMPER NO RS-485 (JP6)

PIN	ASSIGNMENT	PIN	ASSIGNMENT
1	+5V	2	RTSB-

2-33 COM2 RS-232/422/485 SELECT (JP7)

1-2 ON: RS-485   **3-4 ON: RS-422**   **5-6 ON: RS-232**

2-34 COM1 D-SUB PIN 1, 9 VOLTAGE OR SIGNAL SELECT (JP8)

1-3 ON: +12V   **3-5 ON: RI (Default)**
2-4 ON: DCD (Default)   **4-6 ON: VCC5V**

2-35 COM2 D-SUB PIN 1, 9 VOLTAGE OR SIGNAL SELECT (JP9)

1-3 ON: +12V   **3-5 ON: RI (Default)**
2-4 ON: DCD (Default)   **4-6 ON: VCC5V**

2-36 IBM IDE AND CF-II CARD MASTER OR SLAVE (J10)

1-2 ON: Master   **1-2 OFF: Slave**

2-37 WDT OUTPUT SELECT (J11)

WatchDog Timer Output for System Reset or IRQ11 Selection.
When Jumper 1-2 ON, then output signal of WDT will generate a interrupt signal to IRQ11. Once the system accept the interrupt request, will release a ISR address (CS:E000 IP:0000) for user. User can write some interrupt service routine here, to develop application software.
1-2 ON: IRQ11.   **2-3 ON: SYSTEM RESET.**

2-38 LCD PANEL VOLTAGE SELECT (JP12)

1-2 ON: Flat Panel LCDVCC +5V.
2-3 ON: Flat Panel LCDVCC +3.3V.

2-39 BATTERY CMOS CLEAR JUMPER (JP14)

1-2 ON: Default   **2-3 ON: Clear CMOS**

2-40 CompactFlash I/II & IBM MicroDrive SOCKET(CF2)

CompactFlash II socket support CompactFlash type I & II module which meet True IDE specifications, such as: IDE Flash Disk Module or IBM 1.8" MicroDrive 340MB or 1GB HDD.

WARNING: CF II socket support +5V Module only.

2-41 168-PIN DIMM MEMORY SOCKET (DIMM)

This CPU Card use 168-pin DIMM Module.

2-42 MANUFACTURER DEFAULT JUMPER LIST

Factory default jumper list as below:
CN4: PROGRAM CONNECTOR

AGP LCD/VGA/TV

THIS CHAPTER SHOWS THE INFORMATION ABOUT VGA FUNCTIONS.

SECTIONS INCLUDE:

* **DEFINES INTEGRATED SOLUTIONS FOR VALUE PC MOBILE DESIGNS**
* **HIGH PERFORMANCE CPU INTERFACE**
* **ADVANCED HIGH-PERFORMANCE DRAM CONTROLLER**
* **EXTENSIVE LCD SUPPORT**
* **HIGH SCREEN RESOLUTION CRT SUPPORT**
* **TFT LCD DATA OUTPUT**
* **STN LCD DATA OUTPUT**
* **QUICK INSTALLATION GUIDE**

3-1 Defines Integrated Solutions for Value PC Mobile Designs

High performance SMA North Bridge: Integrated VIA Apollo Pro133A
and S3® Savage4ä in a single chip
64-bit Advanced Memory controller supporting PC100/PC133 SDRAM and
VCM
Combines with VIA VT82C686A/B PCI-ISA South Bridge for
state-of-the-art power management

Note: *If you need installation WinNT40 Server VGA. Remember you
need installation WinNT40 Server Pack3 or up (4 ~ 6). If you
don't install first then you can't install S3 VGA driver.*

3-2 High Performance CPU Interface

Support for Intel® Pentiumä "Tualatin" processors
66/100/133 MHz CPU Front Side Bus (FSB)
Built-in Phase Lock Loop circuitry for optimal skew control within and
between clocking regions
Five outstanding transactions (four In-Order Queue (IOQ) plus one output
latch)
Dynamic deferred transaction support

3-3 Advanced High-Performance DRAM Controller

DRAM interface runs synchronous (100/100 or 133/133) mode or pseudo
-synchronous (100/66, 100/133, 133/100) mode with FSB
Concurrent CPU, AGP, and PCI access
Supports SDRAM and VCM SDRAM memory types
Support 3 DIMMs or 6 banks for up to 1.5 GB of DRAM (256Mb DRAM
technology)
64-bit data width
Supports maximum 8-bank interleave (8 pages open simultaneously);
banks are allocated based on LRU
SDRAM X-1-1-1-1-1-1-1 back-to-back accesses

Integrated Savage4 2D/3D/Video Accelerator
Optimized Shared Memory Architecture (SMA)
8 / 16 / 32 MB frame buffer using system memory
Floating point triangle setup engine

Single cycle 128-bit 3D architecture
8M triangles/second setup engine
140M pixels/second trilinear fill rate
Full internal AGP 4x performance
S3 DX7 texture compression (S3TCä)
Next generation, 128-bit 2D graphics engine
High quality DVD video playback
Flat panel monitor support   LVDS/TFT/DSTN
2D/3D resolutions up to 1920x1440 is CRT

3D Rendering Features
Single-pass Single-pass textures
Anisotropic filtering
8-bit stencil buffer
32-bit true color rendering
Specular lighting and diffuse shading
Alpha blending modes
Massive 2K x 2K textures
MPEG-2 video textures
Vertex and table fog
16 or 24-bit Z-buffering
Reflection mapping, texture morphing, shadows, procedural textures and atmospheric effects

2D Hardware Acceleration Features
ROP3 Ternary Raster Operation BitBLTs
8, 16, and 32 bpp mode acceleration

Motion Video Architecture
High quality up/down scaler
Planar to packed format conversion
Motion compensation for full speed DVD playback
Hardware subpicture blending and highlights
Multiple video windows for video conferencing
Contrast, hue, saturation, brightness and gamma controls
Digital port for NTSC/PAL TV encoders

3-4 Extensive LCD Support

36-bit DSTN/TFT flat panel interface with 256 gray shade support
Integrated 2-channel 110 MHz LVDS interface
Support for all resolutions up to 1600x1200 is LCD
ZV-Port Interface
Panel power sequencing
Hardware Suspend/Standby control

Flat Panel Monitor Support
12-bit TFT flat panel interface to TMDS encoders
Digital Visual Interface (DVI) 1.0 compliant

Concurrent PCI Bus Controller

PCI 2.2 compliant, 32-bit 3.3V PCI interface with 5V tolerant inputs
Supports up to 5 PCI masters
PCI to system memory data streaming support
Delay transaction from PCI master accessing DRAM
Symmetric arbitration between Host/PCI bus for optimized system
 performance

Advanced System Power Management Support
Dynamic power down of SDRAM (CKE)
Independent clock stop controls for CPU / SDRAM, AGP, and PCI bus
PCI and AGP bus clock run and clock generator control
VTT suspend power plane preserves memory data
Suspend-to-DRAM and self-refresh power down
Low-leakage I/O pads
ACPI 1.0B and PCI Bus Power Management 1.1 compliant

3-5 High Screen Resolution CRT Support

Resolutions Supported	System Memory Frame Buffer Size	
	8MB	16/32 MB
640x480x8/16/32	v	v
800x600x8/16/32	v	v

3-8 QUICK INSTALLATION GUIDE

♻ VGA DRIVER FOR WIN9X & ME

You will install VGA driver first Step
A: Double click "4in1440.exe"

B: Click " Next >"
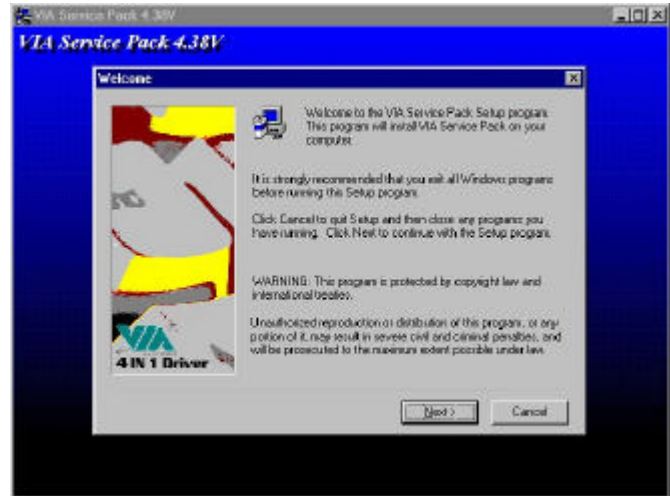

A: Click " Yes"
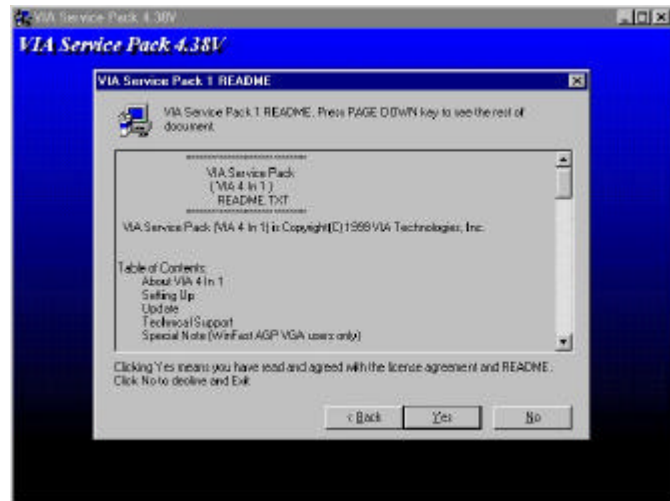

See 4in1 Setup Mode Option
A: Select "Normally Install"

B: Click " Next"

Setup Component select all
A: Click "Next >"
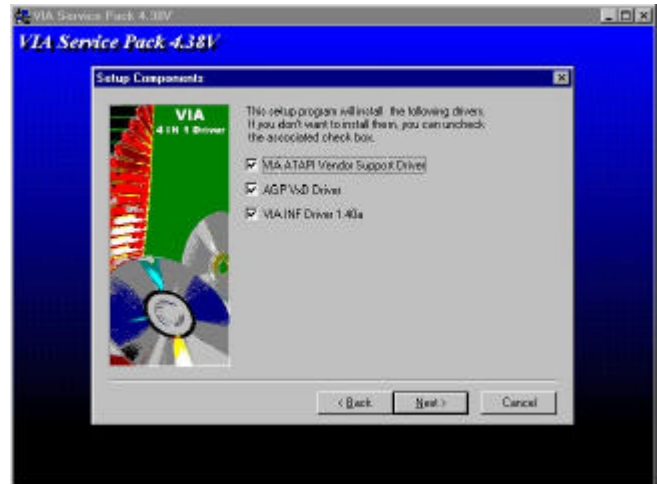

A: Select "Install VIA ATAPI
Vendor Support Driver"

B: Click "Next >"

A: Enable Select .

B: Click "Next >"

A: Select "Install VIA AGP VxD in turbo mode."

B: Click "Next >"
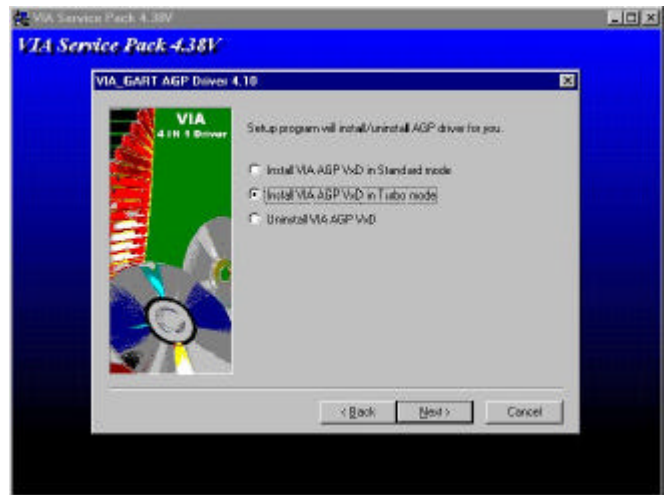

Install Step
A: Install Finish Select " Yes, I want to restart my computer now."
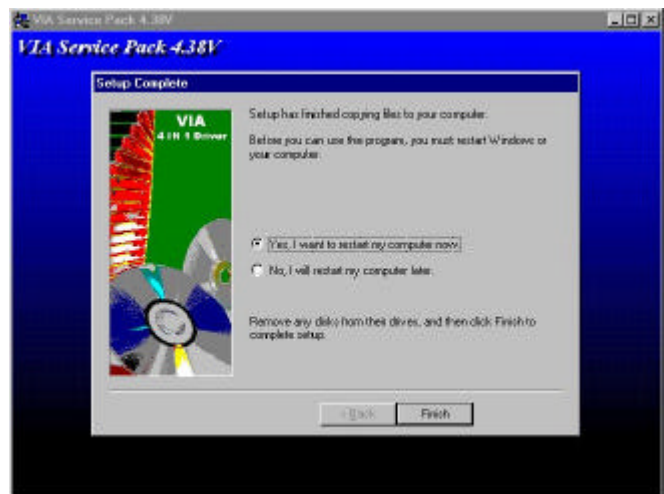

B: Click " Finish".

Restart Later.

A: Unzip
  "d:\CPU Card\673-683
  \VGA\Win9x"

B: Double Click "Setup.exe".

A: Click "Next >"

Continual Setup
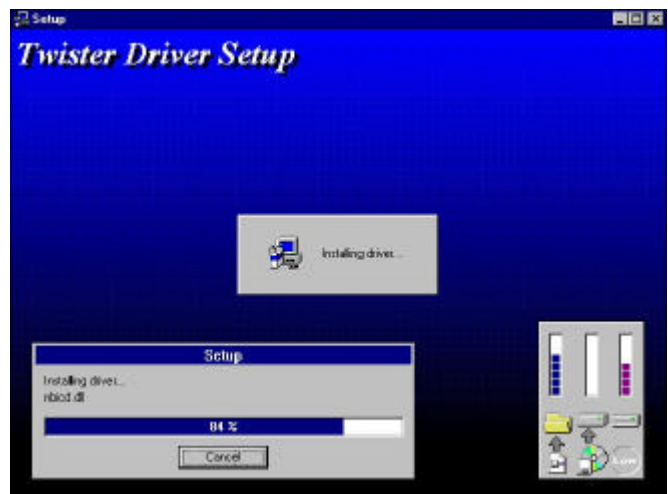

A: Setup Finish Select " Yes, I want to restart my computer now."

B: Click "Finish".

VGA DRIVER FOR Win2000

A: Unzip
   **"d:\ CPU Card\673-683\
   VGA\Win2K\ Win2K.zip"**

**B: Double Click "C:\Program
   Files\673-683\Win2K\
   Setup.exe"**

A: Click "Next >"

Twister Driver Setup

Installing Driver

Setup Complete

A: Click " Finish"

B: Reboot System

VGA DRIVER FOR WinNT40

A. Select "Start" →"Seting"
→ "Control Panel"→
"Display" →
"Display Properties".

B. Click "Display Type"
A. Click "Change"
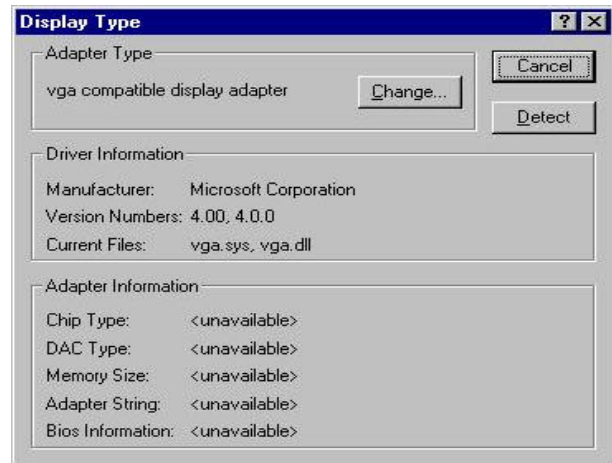

A. Click "Have Disk".
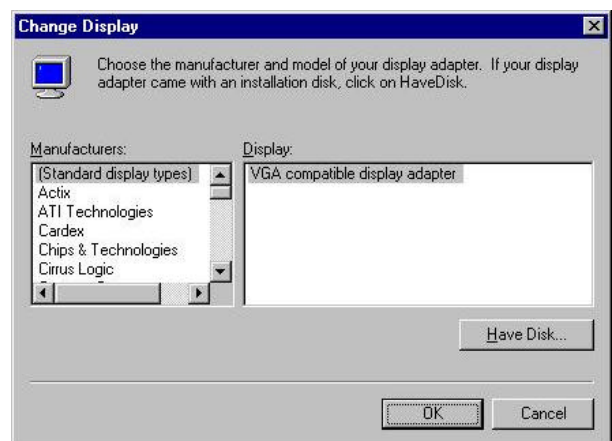

A. Insert CD-ROM Select
   C:\Program Files\673-683
   VGA\NT 40\VGA

B. Click "OK".

A. You can see
   "S3 Graphics Twister "

B. Click "OK".

A: The system will show
   "Do you wish to proceed?"

B: Click "Yes"
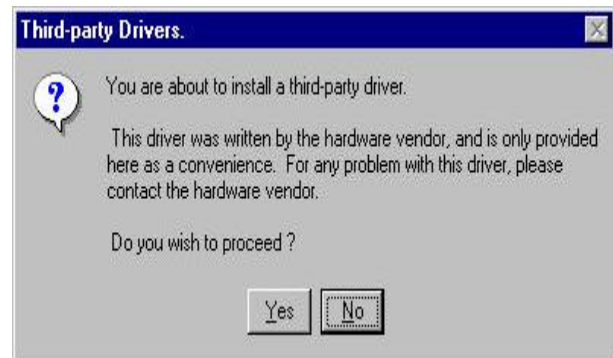

A: Show " The drivers were
   Successfully installed"

B: Click "OK"

100/10M ETHERNET

This chapter shows the information about 100/10M Ethernet functions.

SECTIONS INCLUDE:

* INTRODUCTION
* INSTALLATION OF ETHERNET DRIVER
* FURTHER INFORMATION
* INTRODUCTION
* INSTALLATION OF ETHERNET DRIVER
* FURTHER INFORMATION

4-1 INTRODUCTION

The Board is equipped with a high performance PCI Ethernet chipset which is fully compliant with IEEE 802.3 100 Mbps CSMA/CD standards. It is supported by major network operating systems. It is also both 100Base-T and 10Base-T compatible. The medium type can be configured Reltek the 8139C.exe program include on the utility CD. The Board provides one 10-pin pin header as ethernet connector.

4-2 INSTALLATION OF ETHERNET DRIVER

Before install the Ethernet driver, please note the procedures as below. You must know which operating system you are using in your NC-529 and refer to the corresponding installation flow chart, then follow the steps described in the flow chart. You will quickly and successfully complete the installation, even if you are not familiar with instructions for MS-DOS or Windows.

Note: *The windows illustrations in this chapter are examples only. You must follow the flow chart instructions and pay attention to the instructions which then appear on your screen.*

Installation for MS-DOS and Windows 3.1

If you want to set up your Ethernet connection under the MS-DOS or Windows3.1 environment, you should first check your server system model. For example, MS-NT or IBM-LAN server, and so on. Then choose the correct driver to install in your system.

The installation procedures for various servers can be found on CD. The file path is: D:\>\CPU Card\673-683\NIC\Rtl8139c

Installation for Windows 95/98

A. Select "Start" →"Setting" → "Control Panel".

B. Double Click "Add New Hardware"
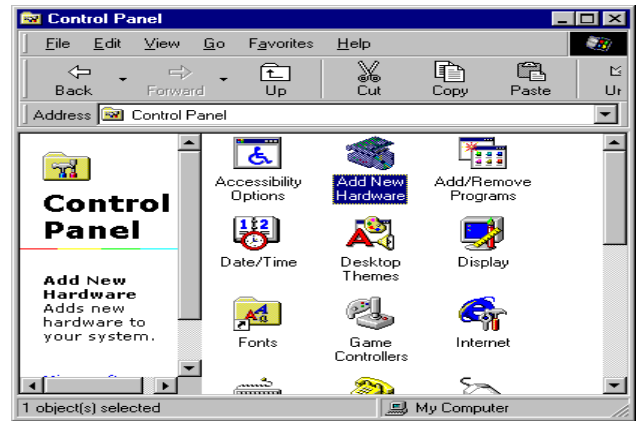

A. Can see "Add New Hardware Wizard".

B. Click "Next >".
A. Insert your CD.

B. Select "Browse"

C. C:\Program Files\673-683\ NIC\Rtl8139c\Win98

A. Windows driver can show "Realtek RTL8139(A/B/C/8130) PCI Fast Ethernet NIC.

B. Click " Next >".

41

A. **Copying Files.**

Copying Files...

Source:
Windows 98 CD-ROM

Destination:
C:\WINDOWS\SYSTEM\VNBT.386

14%

Cancel

A. **Click " Finish".**

Add New Hardware Wizard

Realtek RTL8139(A/B/C/8130) PCI Fast
Ethernet NIC

Windows has finished installing the software that your new
hardware device requires.

< Back   Finish   Cancel
Installation for Windows NT

A. Select "Start", "settings", "Control Panel".

B. Double click "Network".
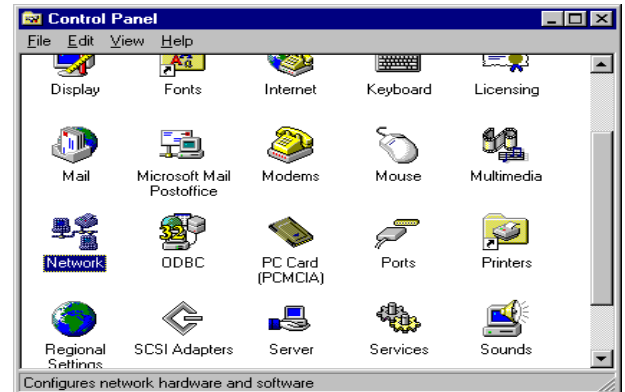

A. Choose the "Adapters" label.

B. Click the "Add" button.

C. Insert CD key-in D:\CPU Card\673-683\NIC\ Rtl8139c\winnt4
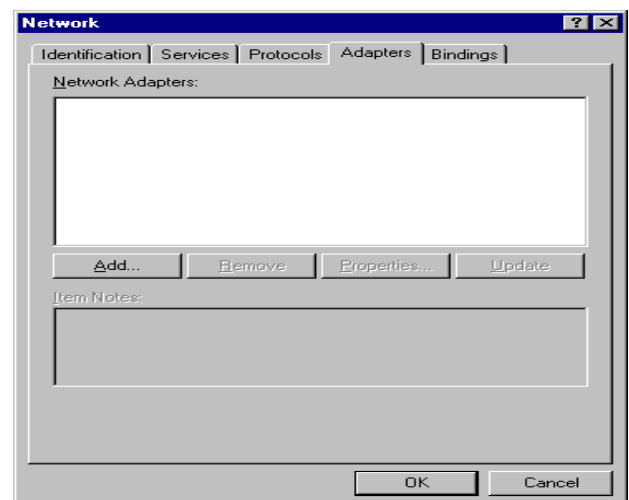

A. show Select OEM Option Realtek RTL8139(A/B/C/8130) PCI Fast Ethernet Adapter

B. Click "OK".

43
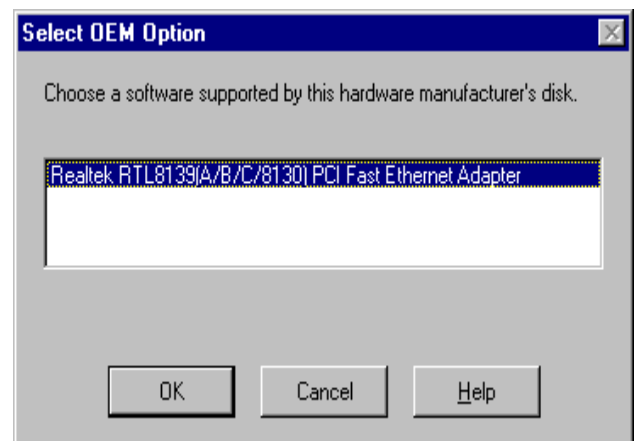

A. Select RTL8139 Duplex Mode

B. Select "(1) AUTO "

C. Click " OK ".
A. Can See Microsoft TCP/IP
    Properties

B. Key-in "IP Address"
   "Subnet Mask"
   "Default Gateway"

C. Click "OK".
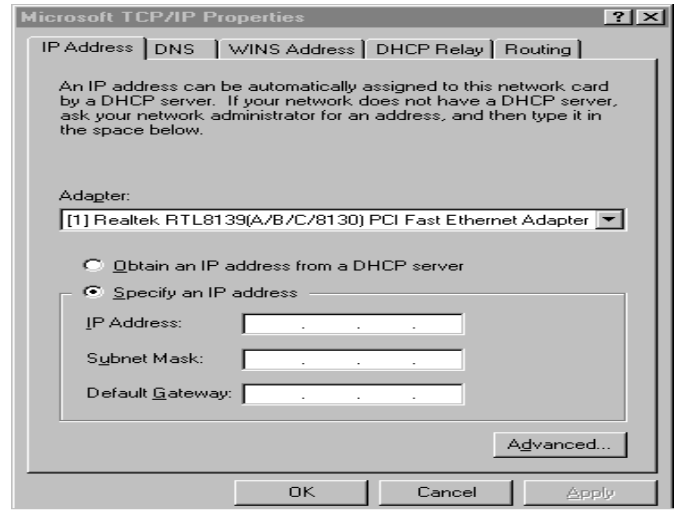

A. Network Settings Change.

B. Click "Yes".

C. Restart your computer now.
4-3 FURTHER INFORMATION

Please reference Realtek website: www.realtek.com.tw

4-4 INTRODUCTION

The CPU BOARD is equipped with two high performance Intel 82559 PCI 100/10M Ethernet chipset which is fully compliant with IEEE 802.3 100 Mbps CSMA/CD standards. It is supported by major network operating systems. The medium type can be configured via the 82559.exe program included on the utility CD.

The CPU BOARD provides two 10-pin pin header as Ethernet connector on board. It also support boot ROM socket which can be utilized by incorporating the boot ROM image files for the appropriate network operating system.

4-5 INSTALLATION OF ETHERNET DRIVER

Before install the Ethernet driver, note the procedures as below. You must know which operating system you are using in your CPU BOARD and refer to the corresponding installation flow chart, then follow the steps described in the flow chart. You will quickly and successfully complete the installation, even if you are not familiar with instructions for MS-DOS or Windows.

Note: *The windows illustrations in this chapter are examples Only. You must follow the flow chart instructions and Pay attention to the instructions which then appear on your screen.*
          It's must unzip d:\CPU Card\673-683\NIC\82559.EXE

Ñ Installation for MS-DOS and Windows 3.1

If you want to set up your Ethernet connection under the MS-DOS or Windoes3.1 environment, you should first check your server system model. For example, MS-NT, IBM-LAN server, and so on.

Then choose the correct driver to install in your panel PC.

The installation procedures for various servers can be found on CD-ROM. The file path is:

          "C:\>Program files\673-683\NIC\DOS"

Ñ Installation 82559 for Windows 95/98

A. Win98 Auto search
  PCI Ethernet Controller

B. Click "Next >".

A. Install CD Select
  "C:\>Program Files\673-683\NIC\
  82559."

B. Click "Next >".
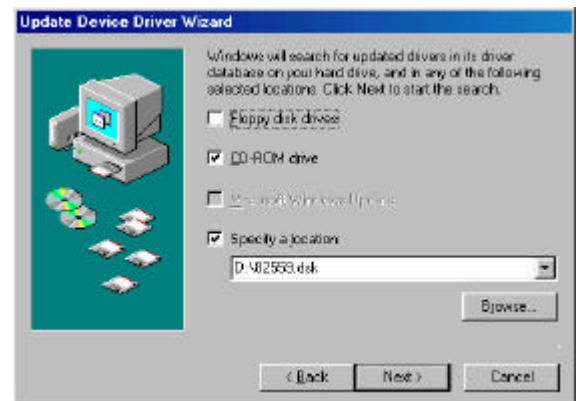

A. Select The updated driver
  [Recommended] Intel[R] PRO/100+
  PCI Adapter.

B. Click "Next >".
A. Computer found Location of driver
  NET82557.INF

B. Click "Next >".
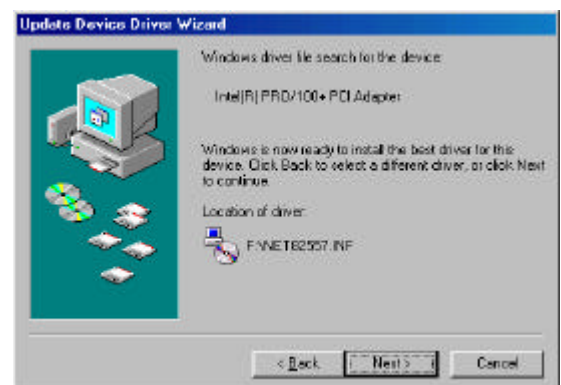

A. Found the New hardware Intel[R] PRO/100+ PCI Adapter

B. Click "Finish".

C. Then Restart Computer.
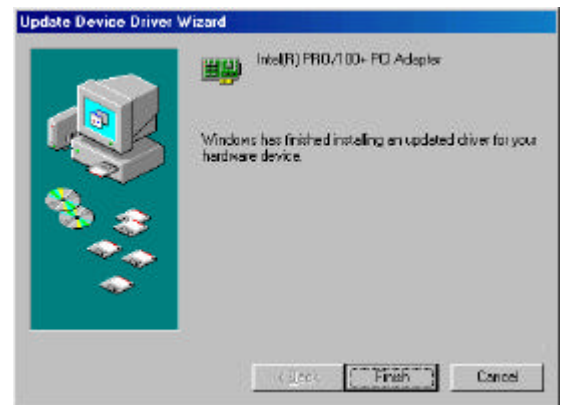

Ñ Installation 82559 for Windows NT

1. a. Select "Start", "settings", "Control Panel".
   b. Double click "Network"

2. a. Choose the "Adapters" label.
   b. Click the "Add" button.

3. Select the "Adapter" item to add the Ethernet card.

4. Click "Have Disk" to install the driver.

5. a. Insert the CD into the D:\ . It's Unzip First
   b. Type: C:\>Program Files\673-683\NIC\82559
   c. Click "OK".

6. a. Choose the "Intel" item.
   b. Click "OK" button.

7. a. Make sure the configurations of relevant items are set correctly.
   b. Click "OK" to reboot.

4-6 FURTHER INFORMATION

Intel website: www.intel.com

W D T

THIS CHAPTER SHOWS THE INFORMATION OF WDT FUNCTION, ALSO DESCRIBES HOW TO INSTALL THE WATCHDOG CONFIGURATION.

SECTIONS INCLUDE:

* WATCHDOG TIMER FUNCTION

* WATCHDOG TIMER SOFTWARE GUIDE

5-1 WATCHDOG TIMER FUNCTION

The watchdog timer can reset the system or generate a IRQ11 signal automatically. It is defined at I/O port 0443H. When you want to enable the watchdog timer, please write code to I/O port 0443H, then the system will generate a reset or IRQ11 signal. When you want to disable the function, write I/O port 043H (1043H ~ D043H), the system will stop the WDT function.

This CPU board watchdog functions: write I/O port address 0443 to enable watchdog and write I/O port address 043 (1043, 2043, 3043,…D043) to disable watchdog. The following program shows you how to program the watchdog timer in your program.

WatchDog Enable program:

For Example

```
MOV AX, 000FH        (choose the values you need; start from 0 to FF )
MOV DX, 0443H
OUT DX, AX
```

Watchdog Disable program:

```
MOV AX, 000FH         (please ignore this value.)
MOV DX, x043H          "x = 2,3,4,5,6,7,8,9,A,B,C,D"
OUT DX, AX
```

Please find the time you need and the corresponding value from the following Watchdog Timer Control Table:

TIME BASE IS LIST BELOW

VA Mean is Value for counter   **: Unit Hexdecimal**
Time Mean is WDT Signal response time   **: Unit Decimal (second)**

Va	time	Va	time	va	time	Va	time	va	time	va	time	va	time	va	time

5-2 WATCHDOG SOFTWARE GUIDE

User can use WDT function by following way:

1.Direct start WDT function as procedure which described on Sec. 5-1.

FOR EXAMPLE:

```
  MOV AL, 44
  OUT   70, AL
  IN       AL, 71
 MOV DX, 0443
 OUT DX, AL
  RET
```

The above simple software was written under DOS DEBUG. It shows you how to get the SETUP VALUE from CMOS   location 44H.

If you want to read the data correctly, you must put the data 44 value on register AL first.

Then you must put the register value (44) on port 70H (this mean you need to addressing the port 70H)

Whenever you need, you can send the data to I/O port 0443H to trigger the WDT timer and for your application.

A W A R D   B I O S   S E T U P

THIS CHAPTER SHOWS HOW TO SETUP THE AWARD BIOS.

 SECTIONS INCLUDE:
 * **INTRODUCTION**
 * **STARTING SETUP**
 * **MAIN MENU**
 * **STANDARD CMOS SETUP**
 * **ADVANCED BIOS FEATURES**
 * **ADVANCED CHIPSET FEATURES**
 * **INTEGRATED PERIPHERALS**
 * **POWER MANAGEMENT SETUP**
 * **PNP/PCI CONFIGURATIONS**
 * **PC HEALTH STATUS**
 * **FREQUENCY/VOLTAGE CONTROL**
 * **LOAD FAIL-SAFE DEFAULTS**
 * **SUPERVISOR/USER PASSWORD SETTING**
 * **BIOS DEFAULT DRIVE TABLE**

6-1 INTRODUCTION

This section discusses Phoenix-Award Setup program built in the ROM BIOS. The Setup program allows users to modify the basic system configuration. This special information is then stored in battery-backed RAM so that it retains the Setup information when the power is turned off.

The Phoenix-Award BIOS installed in computer system's ROM (Read Only Memory) is a custom version of an industry standard BIOS. This means it supports VIA Eden ESP ESP4000/5000/6000 processors in a standard IBM AT compatible Input/ Output system. The BIOS provides critical low-level support for standard devices such as disk drives, serial and parallel ports. Also the BIOS has been customized by adding important, but non-standard, features such as virus and password protection as well as special support for detailed fine-tuning of the chipset controlling the entire system. The rest of this chapter will try to guide you the process of configuring your system by using Setup.

6-2 STARTING SETUP

The Phoenix-Award BIOS is immediately activated when the computer start power on. The BIOS reads the system information contained in the CMOS and start the process of checking out the system and configuring it. When it finish, the BIOS will seek an operating system on one of the disks and then launch and turn control over to the operating system.

While the BIOS is in control, the Setup program can be activated by one of two ways:
1. Press the <Del> key immediately after switching the system on, or
2. Press the <Del> key when the following message appears briefly
    at the bottom of the screen during the POST (Power On Self Test)
    <u>Press DEL to enter SETUP.</u>

If the message disappears before you respond and you still wish to enter Setup, restart the system to try again by turning it OFF then ON or pressing the "RESET" bottom on the system case. You may also restart by simultaneously pressing <Ctrl>, <Alt>, and <Delete> keys. If you do not press the keys at the correct time and the system does not boot, an error message will be displayed and you will again be asked to...
    <u>PRESS F1 TO CONTINUE,   DEL TO ENTER SETUP</u>

6-3 MAIN MENU

Once you enter the Phoenix-Award BIOS CMOS Setup Utility, the Main Menu will appear on the screen. The Main Menu allows you to select from several setup functions and two exit choices. Use the arrow keys to select among the items and press <Enter> to accept and enter the sub-menu.

Phoenix- AwardBIOS CMOS Setup Utility	
? Standard CMOS Features	**? Frequency/Voltage Control**
? Advanced BIOS Features	**Load Fail-Safe Defaults**
? Advanced Chipset Features	**Load Optimized Defaults**
? Integrated Peripherals	**Set Supervisor Password**
? Power Management Setup	**Set User Password**
? PnP/PCI Configurations	**Save & Exit Setup**
? PC Health Status	**Exit Without Saving**
Esc : Quit	**: Select Item**
F10 : Save & Exit Setup	**(Shift) F2 : Change Color**
Time, Date, Hard Disk Type.....	

Note that a brief description of each highlighted selection appears at the bottom of the screen.

Setup Items:

The main menu includes the following main setup categories. Please note that some systems may not include all entries.

- **Standard CMOS Features**
  Use this menu for basic system configurations, such as time, date etc.

- **Advanced BIOS Features**
  This setup includes all the items of Award special enhanced features.

- **Advanced Chipset Features**
  This setup to change the value in the chipset registers and optimize
  Your system's performance..

- **Integrated Peripherals**
  This setup to specify your settings for integrated peripherals.

- **Power Management Setup**
  Use this setting to specify your settings for power management.

- **PnP / PCI Configuration**
  This setup appears if your system supports PnP / PCI.

- **PC Health Status**
  This entry display the current status of your PC..

- **Frequency/Voltage Control**
  Use this item to specify your settings for   Frequency/Voltage control.

- **Load Fail-Safe Defaults**
  This menu to load the BIOS default values for the minimal/stable
  performance of your PC

- **Load Optimized Defaults**
  This item to load the default factory settings for BIOS for optimal
  system performance..

- **Supervisor / User Password Setting**
  Change, set, or disable password. It allows you to limit access to the
  system and Setup, or just to Setup.

- **Save & Exit Setup**
  Save CMOS value changes to CMOS and exit setup.

- **Exit Without Saving**
  Abandon all CMOS value changes and exit setup.

6-4 STANDARD CMOS FEATURES

The items in Standard CMOS Setup Menu are divided into 10 categories. Each category includes none, one or more than one setup items. Use the arrow keys to highlight the item and then use the <PgUp> or <PgDn> keys to select the value you want in each item.

```

● **Date**

   To assign the system date, the format is "mm:dd:yy". The input range for the Month is 1-12. Rang for Date is 1-31. Rang for Year is 1994-2099. System BIOS will calculate the day of the week automatically.

● **Time**

   The time format is <hour> <minute> <second>. The time is calculated based on the 24-hour military-time clock.   For example, 1 p.m. is 13:00:00.

- **IDE Primary Master/Slave /Secondary Master/Slave**
  Press PgUp/<+> or PgDn/<-> to select the hard disk drive type. The
  Specification of hard disk drive will show up on the right hand according
  To your selection.

```

```

Access Mode	The settings are Auto, CHS, LBA and Large.
Capacity	The formatted size of the storage device.
Cylinder	Number of cylinders.
Head	Number of heads.
Precomp	Write precompensation.
Landing Zone	Cylinder location of the landing zone.
Sector	Number of sectors.

- **Drive A Type / Drive B Type**
  The category identifies the types of   Floppy Disk Drive A or Drive B that
  have been installed in the computer.

● Video

The category selects the type of video adapter used for the primary system monitor. Although secondary monitors are supported, you do not have to select the type in Setup.

EGA/VGA	Enhanced Graphics Adapter/Video Graphics Array. For EGA, VGA, SEGA, SVGA or PGA monitor adapters.
CGA 40	Color Graphics Adapter, power up in 40 column mode.
CGA 80	Color Graphics Adapter, power up in 80 column mode.
MONO	Monochrome adapter include high resolution mono adapters.

● Halt On

This function allows the system to halt when an error is detected during Power-On Self-Test.

No errors	Whenever the BIOS detects a non-fatal error the system Would be stopped and you will be prompted.
All errors	The system boot will not be stopped whenever any error Detected.
All, But Keyboard	The system boot will not stop for a keyboard error but it will stop for all other errors.
All, But Diskette	The system boot will not stop for a disk error but it will Stop for all other errors.
All, But Disk/Key	The system boot will not stop for a keyboard or disk Error but it will stop for all other errors.

6-5 ADVANCED BIOS FEATURES

This section allows you to configure your system for basic operation. You can select the system's default speed, boot-up sequence, shadowing, keyboard operation and security.

```

● **Virus Warning**

  When this function is enabled, the BIOS monitor the boot sector and partition table of the hard disk drive for any attempt at modification. If an attempt is made, the BIOS will halt the system and then display an error message. Afterwards, if necessary, you can run an anti-virus program to locate and remove the problem before any damage is done. Many disk diagnostic programs will attempt to access the boot sector table, which can cause the above warning message. If you run such a program, we recommend that you first disable the Virus Warning function beforehand. The default value is disabled.

- **CPU Internal Cache**

  This field configures the CPU internal cache (L1 cache). The default value is enabled.

- **External Cache**

  This field configures the system's external cache (L2 cache). The default value is enabled.

- **CPU L2 Cache ECC Checking**

  This field specifies whether the CPU L2 cache supports ECC or not. The default value is enabled.

- **Quick Power On Self Test**

  This category speeds up Power On Self Test (POST) after you power up the computer. If it is set to Enable, BIOS will shorten or skip some check items during POST.

- **First Boot Device**

  This option allows user to assign first boot of the system. Available options are A, C, D, E, F, CD-ROM, LAN, SCSI and LS120/ZIP100.

- **Second Boot Device**

  This option allows user to assign second boot of the system. Available options are A, C, D, E, F, CD-ROM, LAN, SCSI and LS120/ZIP100.

- **Third Boot Device**

  This option allows user to assign third boot of the system. Available options are A, C, D, E, F, CD-ROM, LAN, SCSI and LS120/ZIP100.

- **Boot Other Device**

  This option allows user to other Device , you can select Enabled or Disabled.

- **Swap Floppy Drive**

  When enabled, physical drive A will be assigned to logical drive B, and physical drive B will be assigned to logical drive A.

- **Boot Up Floppy Seek**

  The system will detect and verify operation of the floppy drive type.

- **Boot Up NumLock Status**

  The option allows the <NumLock> key to be activated after system boot up.

- **Gate A20 Option**

  This item allows you to select how the gate A20 is handled. The gate
   A20 is a device used to address memory above 1 Mbytes.   Initially, the
   gate A20 was handled via a pin on the keyboard.   Today, even
   keyboards still provide this support, it is more common and much faster
  for the system chipset to provide gate A20 support.

- **Typematic Rate Setting**

  This item determines if the typematic rate is to be used. When disabled,
   continually holding down a key on your keyboard will generate only one
   instance.   In other words, the BIOS will only report that the key is down.
   When the typematic rate is enabled, the BIOS will report as before, but it
   will then wait a moment, and, if the key is still down, it will begin to report
   that the key has been depressed repeatedly. For example, you would
   use such a feature to accelerate cursor movements with the arrow keys.

- **Typematic Rate (Chars/Sec)**

   Use this option to set the rate at which a character keeps repeating while
   you hold down a key.

- **Typematic Delay (Msec)**

   When the typematic rate is enabled, this selection allows you to select
  the delay between when the key was first depressed and the acceleration
   begins.

- **Security Option**

   You can select whether the password is required every time the system
  boots or only when you enter the Setup. You can assign "Supervisor
   Password" and "User Password" in the main CMOS Setup Utility Screen.

- **OS Select for DRAM > 64**

  If you are using OS/2 operating system and installed memory is larger
  than 64MB. You need to have the setting in the enable mode.

- **Video BIOS Shadow**

   Video shadow copies BIOS code from slower ROM to faster RAM. BIOS
  can then execute from RAM.

- **C8000 - CBFFF Shadow/DC000 - DFFFF Shadow**

  Optional firmware will be copied from ROM to RAM. When this option is
   enabled.

6-6 ADVANCED CHIPSET FEATURES

```

Note: **Change these settings only if you are familiar with the chipset.**

● **DRAM Timing by SPD**
   Selects whether DRAM timing is configured by reading the contents of the SPD (Serial Presence Detect) device on the DRAM module. Setting to Enabled makes both <u>DRAM Cycle Length</u> and <u>DRAM Clock</u> automatically Determined by BIOS according the configurations on the SPD.

● **DRAM Clock**
   The chipset supports synchronous and asynchronous mode between host clock and DRAM clock frequency. The settings are:

   Host CLK   The DRAM clock will be equal to the Host Clock.
   HCLK-33M   The DRAM clock will be equal to the Host Clock minus
                  33MHz, For example, if the Host Clock is 133MHz, the
                  DRAM clock will be 100MHz.
   HCLK+33M   The DRAM clock will be equal to the Host Clock plus
                  33MHz, For example, if the Host Clock is 100MHz, the
                  DRAM clock will be 133MHz.

62

- **SDRAM Cycle Length**

  The option controls the CAS latency, which determines the timing delay before SDRAM starts a read command after receiving it. Settings are 2 and 3 (clock cycles). 2 increases system performance while 3 provides more stable system performance..

- **Memory Hole**

  In order to improve performance, certain space in memory can be reserved For ISA cards, This memory must be mapped into the memory space Below 16MB. When this area is reserved, it cannot be cached. The settings Are Enabled and Disabled (default).

- **P2C/C2P Concurrency**

  This field enables or disables the PCI to CPU and CPU to PCI concurrency Feature, which allows synchronous data transmission from PCI to CPU and vice versa. Selecting the default Enabled will increase system performance.

- **System BIOS Cacheable**

  System BIOS ROM at F000h-F0000h is always copied to RAM for faster Execution. Selecting Enabled allows the contents of F0000h RAM memory Segment to be written to and read from cache memory, resulting in better System performance. However, if any program writes to this memory area, A system error may result.
  The settings are Enabled and Disabled (default).

- **Video RAM Cacheable**

  The field allows the caching of video memory, resulting in increased system Performance. Settings are Enabled and Disabled (default).

- **Frame Buffer Size**

  Frame Buffer is the video memory that stores data for video display (frame). This field is used to determine the memory size for Frame Buffer. Larger Frame buffer size increases video performance.
  Setting are 2M, 4M and 8M (default).

- **AGP Aperture Size**

  Select the size of the Accelerated Graphics Port(AGP) aperture. Aperture Is a portion of the PCI memory address range dedicated for graphics memory Address space. Host cycles that hit the aperture range are forwarded to the AGP Without any translation. Options are 4M, 8M, 16M, 32M, 64M and 128M.

● Panel Type
This item is select LCD Panel type.

Panel Type	Support Function
[00]	640 x 480 TFT
[01]	800 X 600 TFT
[02]	1024 X 768 TFT 2pixel/clk at 32MHz
[03]	1280 x 1024 TFT
[04]	640 X 480 DSTN
[05]	800 X 600 DSTN
[06]	1024 X 768 DSTN
[07]	1024 X 768 TFT 1pixel/clk at 65MHz
[08]	640 x 480 TFT
[09]	800 X 600 TFT
[0A]	1024 X 768 TFT
[0B]	1280 X 1024 TFT
[0C]	1400x1050 TFT 2pixel/clk at 54Mhz
[0D]	800 X 600 DSTN
[0E]	1024 X 768 DSTN
[0F]	1280 X 1024 DSTN

● Boot Device Select
This item is select Boot Device. The Default is "Auto"

● OnChip USB
This is used to enable or disable the USB ports. Settings are Enabled and Disabled. The default is Enabled..

● USB Keyboard Support
Set to Enabled if you need to use an USB keyboard in the operating system that does not support or have any USB driver installed, such as DOS and SCO Unix. Default is Disabled.

● OnChip Sound
Auto allows the mainboard to detect whether an audio device is used. If The device is detected, the onboard audio controller will be enabled; if Not, the controller is disabled. Disabled the controller if you want to use other controller cards to connect an audio device.
Settings are Auto (default) and Disabled..

- **Memory Hole At 15M-16M**
  Enabling this feature reserves 15MB to 16MB memory address space to ISA Expansion cards that specifically require this setting. This makes the memory from 15MB and up unavailable to the system. Expansion cards can only access memory up to 16MB.

- **Passive Release**
  This function is used to meet the latency of the ISA bus master. Try to enable or disable it, if you have ISA card compatibility problem.

- **Delayed Transaction**
  This function is used to meet the latency of PCI cycles to from ISA bus. Try to enable or disable it, if you have ISA card compatibility problem.

- **AGP Aperture Size (MB)**
  Choose 4, 8, 16, 32, 64, 128, 256MB. Memory-mapped, graphics data structure can reside in the Graphics Aperture.

```

● **OnChip IDE Channel 0/1**
  The integrated peripheral controller contains an IDE interface with
  Support for two IDE channels. Choose the default value Enabled to
  Activate each channel separately..

● **IDE Prefetch Mode**
  The onboard IDE drive interface support prefetching, for faster drive
  accesses. Set to Disabled if your primary and/or secondary add-in IDE
  interface does not Support prefetching.

● **Primary/Secondary Master/Slave PIO:**
  The four fields allow you to set a PIO (Programmed Input/Output) mode
  For each of the four IDE devices that the onboard IDE interface supports.
  Modes 0~4 provide increased performance. In Auto mode, BIOS automati-
  cally determines the best mode for each IDE device.

- **Primary/Secondary Master/Slave UDMA:**
  Ultra DMA implementation is possible only if you IDE device supports it and your operating environment contains a DMA driver. If both your hard drive and software support Ultra DMA, select Auto (default) to enable BIOS support.

- **Init Display First:**
  This item specifies which VGA card is your primary graphics adapter. Available options are PCI Slot and AGP. Default value is AGP..

- **IDE HDD Block Mode:**
  This allows your hard disk controller to use the fast block mode to transfer date To and from the hard disk drive. Block mode is also called block transfer, multiple Commands or multiple sector read/write. Enabled enables IDE controller to use block mode; Disabled allows the controller to use standard mode. Default is Enabled.

- **Onboard FDD Controller:**
  This is to enable or disable the onboard Floppy controller. Set to Enabled if you have A floppy disk device installed on the mainboard and want to use it.

- **Onboard Serial Port 1/2:**
  These items specify the base I/O port address and IRQ for the onboard Serial Port 1 (COM 1)/ Serial Port 2 (COM 2). Selecting to Auto allows BIOS to automatically determine the correct base I/O port address. Available options are Auto, *3F8/IRQ4*, *2F8/IRQ3*, *3E8/IRQ4*, *2E8/IRQ3* and Disabled. Default is Auto. If you have ISA add-on card, the suggested configuration is an the following:

- **UART2 Mode:**
  The item allows you to specify the operation mode for serial port "COM 2", Settings are:
  Standard RS-232C Serial Port
  HPSIR   IrDA- compliant Serial Infrared Port.
  ASKIR   Amplitude Shift Keyed Infrared Port.

- **IR Function Duplex:**
  This filed specifies a duplex value for the IR device connected to COM2. Full-Duplex Mode permits simultaneous two-direction transmission. Half-Duplex mode permits Transmission in one direction only at a time. Settings are Half and Full. The default is Half.

- **TX,RX inverting enable:**
  This item allows you to enable the TX, RX inverting which depends on different H/W requirement. This field is not recommended to change its default setting for avoiding any error in your system. Settings are "No, Yes" (default), "Yes, No", "Yes, Yes" and "No, No".

- **Onboard Parallel port:**
  This specifies the base I/O port address and IRQ of the onboard Parallel Port. Settings are 378/IRQ7, 278/IRQ5, 3BC/IRQ7 and Disabled. Default Is 378/IRQ7. If you have an ISA add-on card, the suggested configuration Is as below:

If the ISA add-on card has			Onboard parallel port to be set as	
LPT1 278H	LPT2 278H	LPT3 3BCH	PORT ASSIGNED	IRQ ASSIGNED
v	v	v	DISABLED	X
v	v	X	LPT3	5
v	X	v	LPT2	5
X	v	v	LPT1	7
v	X	X	LPT2	5
X	v	X	LPT1	7
X	X	v	LPT1	7
X	X	X	LPT1	7

> ***Note:*** **If the onboard parallel port interrupt and ISA add-on card interrupt Are in conflict, the parallel port will not work properly. Please Disable one of the devices.**

- **Onboard Parallel Mode:**
  Select an operating mode for the parallel port. Mode options are SPP, EPP1.7, EPP1.9, ECP and ECP/EPP1.7, ECP/EPP1.9 .

- **ECP Mode Use DMA:**
  This item specifies an DMA channel 1 or 3 for the Parallel Port when it is set to ECP or ECP+EPP mode..

- **Parallel Port EPP Type:**
  This item selects the EPP version used by the parallel port if the port is Set to EPP or ECP+EPP mode. Settings are EPP1.7 and EPP1.9..

- **Onboard Legacy Audio:**
  This item enables or disables the onboard audio features of the mainboard and the following audio options in the BIOS.

- **Sound Blaster:**
  This item turns on/off the sound blaster feature of the board. If you want to play Sound Blaster compatible games, you need to set the field to Enabled..

- **SB I/O Base Address**
  This item specifies the I/O Base Address for the Sound Blaster. Settings .are 220H, 240H, 260H and 280H.

- **SB IRQ Select:**
  This item specifies the IRQ for the Sound Blaster. Settings are IRQ5, IRQ7, IRQ9 and IRQ10.

- **SB DMA Select**
  This item specifies the DMA channel for the Sound Blaster. Settings are DMA 1, DMA 2, DMA 3, and DMA 0. .

- **MPU-401**
  The field enables or disables the MPU-401 interface (the Yamaha Sound Blaster mode).

- **MPU-401 I/O Address:**
  This item selects the base I/O port address for the MPU-401 interface. Settings are 330-333H, 300-303 and 310-313..

● **ACPI Function**

This item is to activate the ACPI (Advanced Configuration and Power Management Interface) Function. If your operating system is ACPI-aware, Such as Windows 98 SE/2000/ME, select Enabled. Settings are Enabled and Disabled. Default is Enabled.

Power Management	[User Define]	Item Help
HDD Power Down	[Disable]	
Doze Mode	[Disable]	Menu Level ? ?
Suspend Mode	[Disablef]	

:Move   Enter:Select   ↓- /PU/PD:Value   F10:Save   ESC :Exit F1:General Help
F5: Previous Values   F6: Fail-Safe Defaults   F7: Optimized Defaults

● **Power Management**

This item allows you to select the type (or degree) of power saving and it is
directly related to the following modes:

There are three selections for Power management, four of which have fixed
mode settings.

Disabled	The system operates in Normal conditions (Non-GREEN), and the Power Management function is disabled.
Max. saving	Maximum Power Management. Doze Mode = 10 sec, Suspend Mode = 10 sec, and HDD Power Down= Disabled.
Min. saving	Minimum Power Management. Doze Mode = 1 hour, Suspend Mode = 1 hour, and HDD Power Down= Disabled.
User define	Allow end users to configure each mode separately. Each of the ranges are from 1 min. to 1 hour except for HDD Power Down which ranges from 1 min to 15 min..

● **HDD Power Down**

If HDD activity is not detected for the length of time specified in this field,
The hard disk drive will be powered down while all other devices remain
active. Settings are Disable and 1 through 15 Min.

● **Doze Mode**

If System activity is not detected for the length of time specified in this
Field, the CPU clock will run at slower speed while other devices still run
at full speed. Settings are Disable, 1Min, 2 Min, 4 Min, 6 Min, 8Min,
10 Min, 20 Min, 30 Min, 40 Min and 1 Hour. .

● **Suspend Mode**

If system activity is not detected for the length of time specified in this
Field, all devices except CPU will be shut off. Settings are Disable, .
1Min, 2 Min, 4 Min, 6 Min, 8Min, 10 Min, 20 Min, 30 Min, 40 Min and
1 Hour.

● **PM Control by APM**
  Setting to *Yes* will activate an Advanced Power Management (APM)
  Device to enhance Max Saving mode and stop CPU internal clock.
  Settings are *Yes* and *No*. Default is *Yes*.

● **Video Off Option**
  The settings are Always On, Suspend and All Modes, This option is for choosing
  the setting in which the monitor will turn off.

Always On	Always turn on.
Suspend → Off	During Suspend mode, the monitor will be turn off.
All Mode → Off	The monitor is turned off during Doze, Standby or Suspend Mode.

● **Video Off Method**
  This determines the manner in which the monitor is blanked.

V/H SYNC+Blank	**This selection will cause the system to turn off the Vertical and horizontal synchronization ports and Write blanks to the video buffer.**
Blank Screen	**This option only writes blanks to the video buffer**
DPMS Support	**Initial display power management signaling**

● **MODEM Use IRQ**
  Name the interrupt request (IRQ) line assigned to the modem(if any) on
  Your system. Activity of the selected IRQ always awakens the system.
  Settings are 3,4,5,7,9,10,11 and NA.

● **Soft-Off by PWRBTN**
  This feature allows users to configure the power button as a normal
  Power on/off button or a soft-off button. Setting are:

Instant-Off	The power button functions as a normal power –on/ -off button.
Delay 4 Sec.	Pressing the power button for more than 4 seconds Will place the system in a very low-power-usage State (Soft-Off state), with only enough circuitry receiving power to detect power button activity or Wake Up On LAN/Ring activity.

  Default is *Instant-Off.*

● **VGA, LPT & COM, HDD & FDD, PCI Master, Wake Up On LAN, PowerOn by PCI Card, Modem Ring Resume**
  These items specify whether the system will be awakened from power Saving modes when activity or input signal of the specified hardware peripheral or component is detected.

  Note: *To use the function of Wake Up On LAN and Modem Ring Resume, you need to install a LAN card/modem supporting Power on function.*

● **RTC Alarm Resume**
  This is to enable or disable the feature of booting up the system on a Scheduled time/date. Settings are *Enabled* and *Disabled*(default)

● **Data(of Month)**
  Specifies the data for RTC Alarm Resume. Settings are 0~31...

● **Resume Time(hh:mm:ss)**
  Specifies the time for RTC Alarm Resume. Format is <hour><minute> <second>f.

● **IRQ [3-15]**
   **Enables or disables the monitoring of the specified IRQ line. If set to
  Enabled, the activity of the specified IRQ line will prevent the system
   from entering power saving modes or awaken it from power saving
   modes.**

  *Note***: IRQ (Interrupt Request) line are system resources allocated to
           I/O devices. When an I/O device needs to gain attention of the
           operating system, it signals this by causing an IRQ to occur. After
           receiving the signal, when the operating system is ready, the
           system will interrupt itself and perform the service required by the
           I/O device.**

6-9 PNP/PCI CONFIGURATION SETUP

This section describes about configuring the PCI bus system. PCI (Personal Computer Interconnect) is a bus standard which allows I/O devices to operate at the speed near to the speed which is the CPU itself uses when communicating with its own special components. This section covers some very technical item and it is strongly recommended that only experienced users should make any changes to the default settings.

```
          Phoenix – AwardBIOS CMOS Setup Utility
                   PnP/PCI Configurations

  PNP OS Installed            [No]              Item Help
  Reset Configuration Data    [Disabled]
                                              Menu Level ?

  :Move   Enter:Select   +/- /PU/PD:Value  F10:Save   ESC :Exit  F1:General Help
  F5: Previous Values         F6: Fail-Safe Defaults      F7: Optimized Defaults
```

- **PNP OS Installed**

  When set to YES, BIOS will only initialize the PnP cards used for booting (VGA, IDE, SCSI). The rest of the cards will be initialized by the PnP operating system like Windows 95 or 98. When set NO, BIOS will initialize all the PnP cards. So, select Yes if the operating system is Plug & Play aware.

- **Reset Configuration Data**

  The ESCD (Extended System Configuration Data) is a method that the BIOS uses to store resource information for both PNP and non PNP Devices in a bit string format. When Enabled, the system will rebuild ESCD and you will see the message "ESCD Update Successfully" on Boot up.

- **Resources Controlled By**

  If select Auto (ESCD), BIOS will automatically configure all the boot and PnP. (Plug & Play) compatible devices and assigns system resources like IRQ to these devices. However, this feature means absolutely nothing unless you are using a Plug and Play operating system such as Windows 95/98. If you want to configure by yourself, select Manual. Default is Auto(ESCD).

- **IRQ/DMA Resources**

  The items are adjustable only when Resources Controlled By is set to Manual. Press<Enter> and you will enter the sub-menu of the items. IRQ Resources & DMA Resources list IRQ 3/4/5/7/9/10/11/12/14/15 and DMA 0/1/3/5/6/7 for users to set each IRQ/DMA a type depending on the type of device using the IRQ/DMA. Settings are:

  PCI/ISA PnP   For Plug & Play compatible devices designed for PCI or ISA bus architecture.

  Legacy ISA   For devices compliant with the PC AT bus specification, Requiring a specific interrupt.

- **PCI/VGA Palette Snoop**

  When set to Enabled, multiple VGA devices operating on different buses Can handle data from the CPU on each set of palette registers on every Video device. Bit 5 of the command register in the PCI device configuration Space is the VGA palette Snoop bit(0 is disabled). For example, if there are two VGA devices in the computer (one PCI and one ISA) and the:

VGA Palette Snoop Bit Setting	Action
Disabled	Data read or written by the CPU is only directed to the PCI VGA device's palette registers.
Enabled	Data read or written by the CPU is directed to both the PCI VGA device's palette registers and the ISA VGA device's palette registers, permitting the palette Registers of both VGA devices to be indentical.

The setting must be set to *Enabled* if any ISA adapter card installed in the System requires VGA palette snooping. The Setup and BIOS default values are *Disabled*.

- **Assign IRQ For VGA/USB**
  Set to *Enabled* allows BIOS to assign an IRQ to VGA card/USB device. Choose *Disabled* if you want to release the IRQ. Default is *Enabled*.

6-10 PC HEALTH STATUS

```
            Phoenix – AwardBIOS CMOS Setup Utility
                        PC Health Status

```

Warning: **Over-clocking is not guaranteed. Users must have Substantial knowledge of proper CPU relative to Adjusting CPU speeds. Over-clocking should be done Only by experienced engineers who conduct tests.**

● **Auto Detect DIMM/PCI Clk**
Use this item to enable or disable the feature of auto detecting the clock Frequency of the installed DRAM DIMM and PCI cards, Settings are Enabled (default) and Disabled.
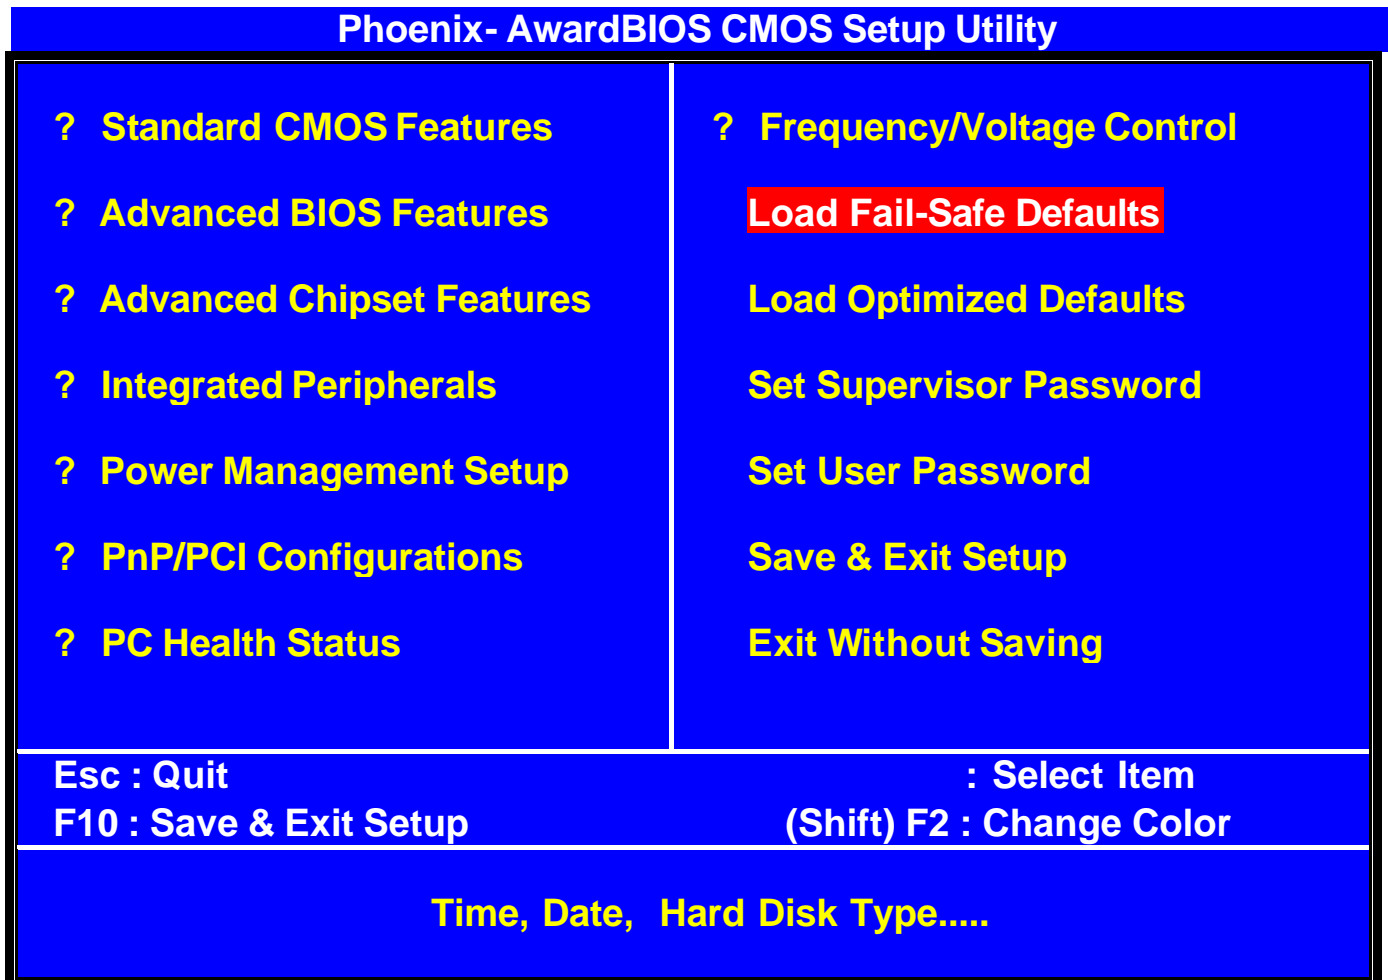

● **CPU Host Clock (CPU/PCI)**
This item specifies the clock frequency of CPU host bus (FSB) and PCI bus And provides a method for end users to overclock the processor accordingly. If the item shows Default, the clock frequency will use the default value for Both the CPU host bus and PCI bus.

6-12 LOAD FAIL-SAFE/OPTIMIZED DEFAULTDS

The two options on the main menu allow users to restore all of the BIOS Settings to the default Fail-Safe or Optimized values. The Optimized Defaults Are the defaults values set by the IPC manufacture specifically for the optimal Performance of the IPC. The Fail-Safe Defaults are the default values set by the BIOS vendor for the stable system performance.

When you select Load Fail-Safe Defaults, a message as below appears:

Phoenix- AwardBIOS CMOS Setup Utility	
? Standard CMOS Features	? Frequency/Voltage Control
? Advanced BIOS Features	Load Fail-Safe Defaults
? Advanced Chipset Features	Load Optimized Defaults
? Integrated Peripherals	Set Supervisor Password
? Power Management Setup	Set User Password
? PnP/PCI Configurations	Save & Exit Setup
? PC Health Status	Exit Without Saving
Esc : Quit	: Select Item
F10 : Save & Exit Setup	(Shift) F2 : Change Color
Time, Date, Hard Disk Type.....	

Pressing Y loads the BIOS default values for the most stable, minimal system. Performance.

6-13 SUPERVISOR/USER PASSWORD SETTING

You can set either supervisor or user password, or both of them. The difference between them are: 'supervisor password' can enter and change the options of the setup menus and ' user password' just can enter but do not have the right to change the options of the setup menus.

When you select this function, the following message will appear at the center of the screen to assist you in creating a password.

ENTER PASSWORD :

Type the password, up to eight characters in length, and press <Enter>. The password typed now will clear any previously entered password from CMOS memory. You will be asked to confirm the password. Type the password again and press <Enter>. You may also press <Esc> to abort the selection and not enter a password.

To disable a password, just press <Enter> when you are prompted to enter the password. A message will confirm the password will be disabled. Once the password is disabled, the system will boot and you can enter Setup freely.

PASSWORD DISABLED.

When a password has been enabled, you will be prompted to enter it every time you try to enter Setup. This prevents an unauthorized person from changing any part of your system configuration.

Additionally, when a password is enabled, you can also require the BIOS to request a password every time your system is rebooted. This would prevent unauthorized use of your computer.

You determine when the password is required within the BIOS Features Setup Menu and its Security option. If the Security option is set to "System", the password will be required both at boot and at entry to Setup. If set to "Setup", prompting only occurs when trying to enter Setup.

TECHNICAL SUMMARY

THIS SECTION SHOWS YOU THE MAPES CONCISELY.

SECTIONS INCLUDE:

* INTERRUPT MAP

* TIMER & DMA CHANNELS MAP

* RTC & CMOS RAM MAP

* I/O & MEMORY MAP

A-1 INTERRUPT MAP

IRQ	ASSIGNMENT
0	System TIMER interrupt from TIMER-0
1	Keyboard output buffer full
2	Cascade for IRQ 8-15
3	Serial port 2
4	Serial port 1
5	Parallel port 2
6	Floppy Disk adapter
7	Parallel port 1
8	RTC clock
9	Available
10	Available
11	Available
12	Available
13	Math coprocessor
14	Hard Disk adapter
15	Available

A-2 TIMER & DMA CHANNELS MAP

● **Timer Channel Map**

Timer Channel	Assignment
0	System timer interrupt
1	DRAM Refresh request
2	Speaker tone generator

● **DMA Channel Map**

DMA Channel	Assignment
0	Available
1	IBM SDLC
2	Floppy Disk adapter
3	Channel-3 Available
4	Cascade for DMA controller 1
5	Available
6	Available
7	Available

A-3 RTC & CMOS RAM MAP

CODE	ASSIGNMENT
00	Seconds
01	Second alarm
02	Minutes
03	Minutes alarm
04	Hours
05	Hours alarm
06	Day of week
07	Day of month
08	Month
09	Year
0A	Status register A
0B	Status register B
0C	Status register C
0D	Status register D
0E	Diagnostic status byte
0F	Shutdown byte
10	Floppy Disk drive type byte
11	Reserve
12	Hard Disk type byte
13	Reserve
14	Equipment byte
15	Base memory low byte
16	Base memory high byte
17	Extension memory low byte
18	Extension memory high byte
30	Reserved for extension memory low byte
31	Reserved for extension memory high byte
32	Date Century byte
33	Information Flag
34-3F	Reserve
40-7F	Reserved for Chipset Setting Data

A-4 I/O & MEMORY MAP

● **Memory Map**

MEMORY MAP	ASSIGNMENT
0000000-009FFFF	System memory used by DOS and application
00A0000-00BFFFF	Display buffer memory for VGA/EGA/CGA/MONO Adapter
00C0000-00DFFFF	Reserved for I/O device BIOS ROM or RAM buffer.
00E0000-00EFFFF	Reserved for PCI device ROM
00F0000-00FFFFF	System BIOS ROM
0100000-BFFFFF	System extension memory

● **I/O Map**

I/O MAP	ASSIGNMENT
000-01F	DMA controller (Master)
020-021	Interrupt controller (Master)
022-023	Chipset controller registers I/O ports.
040-05F	Timer control registers.
060-06F	Keyboard interface controller (8042)
070-07F	RTC ports & CMOS I/O ports
080-09F	DMA register
0A0-0BF	Interrupt controller (Slave)
0C0-0DF	DMA controller (Slave)
0F0-0FF	Math coprocessor
1F0-1F8	Hard Disk controller
278-27F	Parallel port-2
2B0-2DF	Graphics adapter controller
2F8-2FF	Serial port-2
360-36F	Net work ports
378-37F	Parallel port-1
3B0-3BF	Monochrome & Printer adapter
3C0-3CF	EGA adapter
3D0-3DF	CGA adapter
3F0-3F7	Floppy disk controller
3F8-3FF	Serial port-1

APPENDIX

B

TROUBLE SHOOTING

THIS SECTION SHOWS THE ERRORS MAY OCCUR WHEN YOU OPERATE THE SYSTEM, ALSO GIVES YOU THE SUGGESTIONS ON SOLVING THE PROBLEMS.

SECTIONS INCLUDE:

* TROUBLE SHOOTING POST MESSAGE

* TROUBLE SHOOTING POST BEEP

* TROUBLE SHOOTING POST CODE

B-1 TROUBLE SHOOTING POST MESSAGES

During the Power On Self Test (POST), if the BIOS detects an error requiring you to do something to fix, it will either sound a beep code or display a message. If a message is displayed, it will be accompanied by:
<u>PRESS F1 TO CONTINUE, CTRL-ALT-ESC OR DEL TO ENTER</u> **SETUP**

B-2 TROUBLE SHOOTING POST BEEP

Currently there are two kind of beep codes in BIOS.
The one code indicates that a video error has occurred and the BIOS cannot initialize the video screen to display any additional information. This beep code consists of a single long beep followed by three short beeps. The other code indicates that your DRAM error has occurred. This beep code consists of a single long beep repeatedly.

- **Error Messages**
  One or more error messages may be displayed if the BIOS detects an error during the POST. This list includes messages for both the ISA and the EISA BIOS.

- **CMOS BATTERY HAS FAILED**
  CMOS battery is no longer functional. It should be replaced.

- **CMOS CHECKSUM ERROR**
  Checksum of CMOS is incorrect. This can indicate that CMOS has become corrupt. This error may have been caused by a weak battery. Check the battery and replace if necessary.

- **DISKBOOT FAILURE, INSERT SYSTEM DISK AND PRESS ENTER**
  No boot device was found. This could mean that either a boot drive was not detected or the drive does not contain proper system boot files. Insert a system disk into Drive A: and press <Enter>. If you assumed the system would boot from the hard drive, make sure the controller is inserted correctly and all cables are properly attached. Also be sure that the disk is formatted as a boot device. Then reboot the system.

- **DISKETTE DRIVES OR TYPES MISMATCH ERROR - RUN SETUP**
  Type of diskette drive installed in the system is different from the CMOS definition. Run Setup to reconfigure the drive type correctly.

- **DISPLAY SWITCH IS SET INCORRECTLY**
  Display switch on the motherboard can be set to either monochrome or color. This indicates the switch is set to a different setting than indicated in Setup. Determine which setting is correct, and then turn off the selection.

- **DISPLAY TYPE HAS CHANGED SINCE LAST BOOT**

  Since last power off the system, the display adapter has been changed. You must configure the system for the new display type.

- **ERROR ENCOUNTERED INITIALIZING HARD DRIVE**

  Hard drive cannot be initialized. Be sure the adapter is installed correctly and all cables are correctly and firmly attached. Also be sure the correct hard drive type is selected in Setup.

- **ERROR INITIALIZING HARD DISK CONTROLLER**

  Cannot initialize controller. Make sure the card is correctly and firmly installed in the bus. Be sure the correct hard drive type is selected in Setup. Also check if any jumper needs to be set correctly on the hard drive.

- **FLOPPY DISK CNTRLR ERROR OR NO CNTRLR PRESENT**

  Cannot find or initialize the floppy drive controller. Make sure the controller is installed correctly and firmly. If there are no floppy drives installed, be sure the Diskette Drive selection in Setup is set to NONE.

- **Invalid EISA Configuration**

  PLEASE RUN EISA CONFIGURATION UTILITY. The non-volatile memory containing EISA configuration information was programmed incorrectly or has become corrupt. Re-run EISA configuration utility to correctly program the memory.

NOTE: When this error appears, the system will boot in ISA mode, which allows you to run the EISA Configuration Utility.

- **KEYBOARD ERROR OR NO KEYBOARD PRESENT**

  Cannot initialize the keyboard. Make sure the keyboard is attached correctly and no keys are being pressed during the boot. If you are purposely configure the system without a keyboard, set the error halt condition in Setup to HALT ON ALL, BUT KEYBOARD. This will cause the BIOS to ignore the missing keyboard and continue the boot.

- **MEMORY ADDRESS ERROR AT ...**

  Indicates a memory address error at a specific location. You can use this location along with the memory map for your system to find and replace the bad memory chips.

- **MEMORY PARITY ERROR AT ...**

  Indicates a memory parity error at a specific location. You can use this location along with the memory map for your system to find and replace the bad memory chips.

- **MEMORY SIZE HAS CHANGED SINCE LAST BOOT**

  Memory has been added or removed since the last boot. In EISA mode, use Configuration Utility to reconfigure the memory configuration. In ISA mode, enter Setup and enter the new memory size in the memory fields.

- **MEMORY VERIFY ERROR AT ...**

  Indicates an error verifying a value already written to memory. Use the location along with your system's memory map to locate the bad chip.

- **OFFENDING ADDRESS NOT FOUND**

  This message is used in conjunction with the I/O CHANNEL CHECK and RAM PARITY ERROR messages when the segment that has caused the problem which cannot be isolated.

- **OFFENDING SEGMENT:**

  This message is used in conjunction with the I/O CHANNEL CHECK and RAM PARITY ERROR messages when the segment that has caused the problem which has been isolated.

- **PRESS A KEY TO REBOOT**

  This will be displayed at the bottom screen when an error occurs that requires you to reboot. Press any key and the system will reboot.

- **PRESS F1 TO DISABLE NMI, F2 TO REBOOT**

  When BIOS detects a Non- maskable Interrupt condition during boot, this will allow you to disable the NMI and continue to boot, or you can reboot the system with the NMI enabled.

- **RAM PARITY ERROR - CHECKING FOR SEGMENT ...**

  Indicates a parity error in Random Access Memory.

- **SYSTEM HALTED, (CTRL-ALT-DEL) TO REBOOT ...**

  Indicates the present boot attempt has been aborted and the system must be rebooted. Press and hold down the CTRL and ALT keys and press DEL.

B-3 TROUBLE SHOOTING FOR POST CODES

NOTE: EISA POST codes are typically output to port address 300h.
ISA POST codes are output to port address 80h.

POST (hex)	Name	Description
C0	Turn Off Chipset Cache	OEM Specific - Cache control
1	Processor Test 1	Processor Status (1 FLAG) Verification. Tests the following processor status flags Carry, zero, sign, overflow. The BIOS will set Each of these flags, verify they are set , then Turn each flag off and verify it is off.
2	Processor Test 2	Read/Write/Verify all CPU registers except SS, SP, and BP with data pattern FF and 00.
3	Initialize Chips	Disable NMI, PIE, AIE, UEI, SQWV. Disable Video, parity checking, DMA. Reset math Coprocessor. Clear all page registers, CMOS shutdown byte. Initialize timer 0, 1, And 2, including set EISA timer to a known State. Initialize DMA controllers 0 and 1. Initialize interrupt controllers 0 and 1. Initialize EISA extended registers.
4	Test Memory Refresh Toggle	RAM must be periodically refreshed in order To keep the memory from decaying. This Function assures that the memory refresh Function is working properly.
5	Blank video, Initialize keyboard	Keyboard controller initialization.
6	Reserved	
7	Test CMOS Interface And Battery Status	Verifies CMOS is working correctly, detects Bad battery.
BE	Chipset Default Initialization	Program chipset registers with power on BIOS defaults.
C1	Memory presence test	OEM Specific-Test to size on-board memory
C5	Early Shadow	OEM Specific – Early Shadow enable for fast Boot.
C6	Cache presence test	External cache size detection
8	Setup low memory	Early chipset initialization Memory presence test OEM chipset routines Clear low 64K of memory Test first 64K memory.

9	Early Cache Initialization	Cyrix CPU initialization Cache initialization
A	Setup Interrupt Vector Table	Initialize first 120 interrupt vectors with SPURIOUS_INT_HDLR and initialize INT 00h-1Fh according to INT_TBL
B	Test CMOS RAM Checksum	Test CMOS RAM Checksum, if bad, or Insert key pressed, load defaults.
C	Initialize keyboard	Detect type of keyboard controller (optional) Set NUM_LOCK status.
D	InitializeVideo Interface	Detect CPU clock. Read CMOS location 14h to find out type of Video in use. Detect and Initialize Video Adapter.
E	Test Video Memory	Test video memory, write sign-on message To screen. Setup shadow RAM – Enable shadow According to Setup.
F	Test DMA Controller 0	BIOS checksum test. Keyboard detect and Initialization.
10	Test DMA Controller 1	
11	Test DMA Page Registers	Test DMA Page Registers.
12-13	Reserved	
14	Test Timer Counter 2	Test 8254 Timer 0 Counter 2.
15	Test 8259-1 Mask Bits	Verify 8259 Channel 1 masked interrupts by Alternately turning off and on the interrupt Lines.
16	Test 8259-2 Mask Bits	Verify 8259 Channel 2 masked interrupts by Alternately turning off and on the interrupt Lines.
17	Test Stuck 8259's Interrupt Bits	Turn off interrupts then verify no interrupt Mask register is on.
18	Test 8259 Interrupt Functionality	Force an interrupt and verify the interrupt Occurred.
19	Test Stuck NMI Bits (Parity I/O Check)	Verify NMI can be cleared.
1A		Display CPU clock.
1B-1E	Reserved	
1F	Set EISA Mode	If EISA non-volatile memory checksum is Correct, execute EISA initialization. If not, Execute ISA tests an clear EISA mode flag. Test EISA Configuration Memory Integrity (checksum & communication interface).

20	Enable Slot 0	Initialize slot 0 (System Board).
21-2F	Enable Slots 1-15	Initialize slots 1 through 15.
30	Size Base and Extended Memory	Size base memory from 256K to 640K and Extended memory above 1MB.
31	Test Base and Extended Memory	Test base memory from 256K to 640K and Extended memory above 1MB by using Various patterns. **NOTE: This will be skipped in EISA mode And can be "skipped" with ESC key in ISA Mode.**
32	Test EISA Extended Memory	If EISA Mode flag is set then test EISA Memory found in slots initialization. **NOTE: This will be skipped in ISA mode and Can be "skipped" with ESC key in EISA Mode.**
33-3B	Reserved	
3C	Setup Enabled	
3D	Initialize & Install Mouse	Detect if mouse is present, initialize mouse, Install interrupt vectors.
3E	Setup Cache Controller	Initialize cache controller.
3F	Reserved	
BF	Chipset Initialization	Program chipset registers with Setup Values
40		Display virus protect disable or enable
41	Initialize Floppy Drive & Controller	Initialize floppy disk drive controller and Any drives.
42	Initialize Hard Drive & Controller	Initialize hard drive controller and any Drives.
43	Detect & Initialize Serial/Parallel Ports	Initialize any serial and parallel ports (also Game port).
44	Reserved	
45	Detect & Initialize math Coprocessor	Initialize math coprocessor.
46-4D	Reserved	
4E	Manufacturing POST Loop or Display Messages	Reboot if Manufacturing POST Loop pin is Set. Otherwise display any messages (i.e., Any non-fatal errors that were detected During POST) and enter Setup.
4F	Security Check	Ask password security (optional).
50	Write CMOS	Write all CMOS values back to RAM and Clear screen.
51	Pre-boot Enable	Enable parity checker. Enable NMI, Enable Cache before boot.

52	Initialize Option ROMs	Initialize any option ROMs present from C8000h to EFFFFh. **NOTE: When FSCAN option is enabled, will Initialize from C8000h to F7FFFh.**
53	Initialize Time Value	Initialize time value in 40h: BIOS area.
60	Setup Virus Protect	Setup virus protect according to Setup.
61	Set Boot Speed	Set system speed for boot.
62	Setup NumLock	Setup NumLock status according to Setup.
63	Boot Attempt	Set low stack. Boot via INT 19h.
B0	Spurious	If interrupt occurs in protected mode.
B1	Unclaimed NMI	If unmasked NMI occurs, display. Press F1 To disable NMI, F2 reboot.
E1-EF	Setup Pages	E1 - Page 1, E2 – Page 2, etc.
FF	Boot
